Secure document delivery
confidential documents anytime, anywhere

Do you need to send confidential or large documents electronically?

We offer three edocument delivery methods by which you can send sensitive, small and large documents, securely. They are fully auditable, available 24/7/365 and comply with the GDPR's requirements for "appropriate technical measures".

Secure edocument portal

The SSLPost edocument delivery portal allows you to securely send confidential, time critical personalised or non-personalised documents to single or multiple recipients. Create secure libraries and repositories for operations, contracts, employee handbooks & policies, planning & development, pensions, legal and human resources or a Subject Access Request Portal for GDPR compliance.

Secure email

Send files and documents securely via SSLPost secure email. Use web access or download SSLP365, the Microsoft Add-In for Outlook 365 via Windows or Mac. For businesses with their own Exchange server, set your encryption policies centrally and let SSLPost deliver your confidential message, safely. Secure email is also ideal for those businesses who need to send confidential reports, messages containing personal identifiable information and time-sensitive documents.
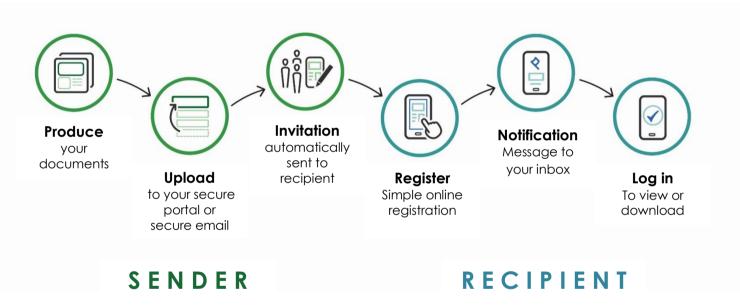

Large file transfer

Are large files causing you problems?   SSLPost enables even the largest files to be transferred securely over the internet without impacting on your email flow.

Most email clients are configured to restrict file sizes (commonly 4GB). This ensures the email system you use does not become overwhelmed with large files, become log jammed or block email traffic. If you have a file or files that exceed your email size restriction, use SSLPost. You can easily select multiple files to add to your email and send them with the assurance they will both send and be delivered with no issues.

Making compliance simpler

Security of personal information is vitally important. When you choose an SSLPost solution, you are choosing to secure your data using enterprise-level encryption. Whether the data is in transit between a business and an employee or at rest on the server, your data is locked up tight using one of the best encryption technologies available in the world today.

Contact us today to learn more about the flexible, secure and cost-effective SSLPost edocument delivery solution.
