Your work stuff, all in one place

Finally, a simple solution to manage your workplace applications on your mobile device

myworksapp from SSLPost, enables employees to access all their key work services in one place, via a simple user interface linked to your important applications, including the SSLPost Secure Employee Self-Service portal.

Many people prefer to access work-related software applications on their mobile devices. **myworksapp** enables them to do this from one, simple screen. Rather than searching through their apps to find what they are looking for, they simply open **myworksapp** on their mobile or desktop to access a wide range of work-related applications including;

- epayslips, P60s, P11Ds, P45s
- HR and other documents
- Employee benefits
- Send and receive secure, encrypted emails
- Receive notifications, messages and multi factor authentication tokens via push message
- Link to workplace pension, HR services, mileage trackers and much, much more!

## Stamp out the cost of expensive email licences!

Users of **myworksapp** alongside employee self-service portals, do not need a company email address and associated email client licence to send and receive work-related secure emails. Email is accessed via the secure employee portal, substantially reducing licencing costs; particularly suitable for blue collar/remote workers.

Short messages can easily be sent to individuals, groups or companywide via push messaging.

SSLPost secure email can be used instead of, or alongside your existing email system, providing reliable email in case of primary email platform outage – ideal for business continuity plans.

myworksapp benefits

➤ Access to all workplace applications, securely, in one place

➤ Easy and intuitive to use

➤ Suitable for all devices – mobile to desktop

➤ Convenient, 24/7/365 access with device and internet connection

➤ Secure and safe

➤ Supports Single Sign On (SSO)

➤ Supports secure email via employee portal

➤ Supports inbuilt push messaging for notifications and Multi Factor Authentication (MFA)

➤ Hosted on secure servers at ISO27001 and Cyber Essentials certified provider

➤ No company email address needed to send secure, encrypted messages

➤ **myworksapp** has been designed with user ease-of-access requirements in mind. Staff can use the three methods for identification of the applications; colour banding, text and/or icons. This combination enables users to quickly and easily identify where they want to go next.

Control, management and integration

✓ Employee portals, users, messages and documents are controlled and managed through the in-built administrator dashboard.

✓ Monitor receipt, administrator and user actions, via simple audit reporting.

✓ Secure email can be sent from an office desktop using **SSLP 365 Add-in for Microsoft Outlook 365**. Configure trigger words centrally or individually to automatically encrypt emails and files. Recipients can respond via desktop or by using their mobile **myworksapp**.

✓ Send messages, personalised and non-personalised documents to one person, a group or the entire organisation.

✓ SSLPost and **myworksapp** solutions are able to integrate with any 3rd party accounting, payroll, HR or email software.
